

# **PACK 1**

## **Baseline Implementation Bundle**

Version: 1.0

Status: Baseline implementation materials

Issuer: YOU AND AI™

Reference: <https://youandai.you/signature/child>

### **Purpose**

Pack 1 provides practical documents to help parents, teachers, and schools implement the Child Mode Declaration Standard consistently.

### **Important**

Pack 1 does not supervise use. Adult responsibility and supervision apply throughout. AI Frame™ is always active.

# Contents

1. Quick Start (New chat = paste again)
2. Implementation Checklist (Parents / Teachers)
3. Classroom Setup Instructions (One Page)
4. Staff Script + Student Rule Sheet
5. Printable Quick Reference (Permitted / Not Permitted)
6. Safeguarding Framing (Scope, limits, and reset rule)

# 1. Quick Start (New chat = paste again)

**Rule:** A new AI chat/session must start with the Child Mode declaration. Do not rely on past sessions. If in doubt, reload the declaration in a new chat.

## Steps

- Start a new AI chat.
- Copy the official Child Mode declaration from the reference page.
- Paste it as the first message and send it.
- Confirm Child Mode is active.
- For every new chat, repeat this process.
- If anything seems off, stop and restart with the declaration.

Official reference: <https://youandai.you/signature/child>

## 2. Implementation Checklist (Parents / Teachers)

- ☐ Child Mode declaration is used at the start of every new chat/session.
- ☐ Adult supervision is present throughout child use.
- ☐ Use is limited to factual explanation, definitions, neutral clarification, and procedural help.
- ☐ No advice is requested or accepted (medical, psychological, legal, behavioural, emotional).
- ☐ If uncertain, the session is restarted and the declaration is reloaded.
- ☐ Students are reminded: AI is a tool, not a person or authority.

### **3. Classroom Setup Instructions (One Page)**

#### **Before class**

- Decide the permitted task (e.g., definitions, neutral explanations, grammar).
- Prepare the Child Mode declaration (open the reference page).
- Plan supervision: AI use is always supervised.

#### **During class**

- Start a new AI chat and paste the declaration as the first message.
- State the student rule: AI is a tool, not an authority; no advice; stop if uncertain.
- Keep prompts task-bounded (facts, explanation, clarification).
- If the AI drifts, stop and restart with the declaration.

#### **After class**

- Do not reuse the same chat for a later lesson.
- If anything concerning occurred, follow the school's existing procedures.

## 4. Staff Script + Student Rule Sheet

### Staff script (read before use)

“Today we are using AI as a tool for neutral help only. We start by activating Child Mode. AI is not a person and not an authority. We will not ask for advice. If anything feels wrong or confusing, we stop and tell the teacher.”

### Student rule (display or read)

- AI is a tool, not a person.
- AI does not make decisions for you.
- AI does not give advice.
- If something seems wrong, stop and tell your teacher.
- New chat = paste the declaration again.

## 5. Printable Quick Reference

### Permitted

- Factual information
- Neutral explanation of concepts
- Definitions and clarification
- Procedural steps (how to do a task)
- Grammar and spelling help

### Not permitted

- Medical, psychological, legal advice
- Behavioural guidance or intervention
- Emotional reassurance or framing
- Persuasive or motivational content
- Moral/value judgement

## 6. Safeguarding Framing (Scope, limits, and reset rule)

Child Mode is a declared interaction context that establishes limits on how an AI system may respond when a child is present.

**Reset rule:** Child Mode remains in effect until the conversation is reset and explicitly removed by an adult. For classroom use, treat each session as new: restart and redeclare every time.

**If in doubt:** The safest action is to reload the declaration at the start of a new AI interaction.
