

# AI Child Use — Public Baseline Declaration

**Version:** v1.0

**Release Date:** 2026-01-08

**Status:** Current

This Public Baseline Declaration establishes minimum child-safe conditions for AI use. It defines non-overridable safety constraints that apply before an AI system responds, ensuring human responsibility, role clarity, and child protection remain central by design.

## Core Conditions

- Pre-interaction declaration of role, limits, and responsibility.
- AI operates as a neutral, task-bounded tool only.
- No medical, legal, psychological, or behavioral guidance.
- No persuasion, moral instruction, or emotional role adoption.
- Model-agnostic and language-agnostic applicability.

## Scope

This baseline applies to any child- or learner-facing AI interaction, including educational, safeguarding, and institutional contexts.

## Relationship to the School Implementation Standard

This Public Baseline defines the minimum safety floor. Institutions requiring formal adoption, liability boundaries, and implementation wording must use the AI Child Use — School Implementation Standard.
