AI Child Mode
Safety Guide for Parents and Educators

Guide approval date: 03 January 2026

Purpose of This Guide

This guide explains how to use **AI Child Mode** to establish a safe, age-appropriate interaction context when a child is involved in an AI conversation.

AI Child Mode is designed for parents, caregivers, educators, and institutions who require clear boundaries to be declared **before** an AI responds.

This guide does not replace adult supervision. It supports it.

What AI Child Mode Is

AI Child Mode is a declared interaction context.

When Child Mode is active, the AI must operate within clearly defined limits suitable for children. These limits are established at the start of a conversation and remain in effect until the conversation is reset by an adult.

Child Mode operates within **AI Frame**, which defines how the AI may respond before any content is generated.

Important: Child Mode is declared using **text**. The Child Mode image functions as a visual confirmation and standard reference, ensuring clarity and consistency across platforms.
